

14.1-AI-ASS
2303A52249

TASK-1: Portfolio Website Design

Prompt: You are building a personal portfolio website to showcase your work.

Requirements:

Create sections for About Me, Projects, and Contact.

Use AI to:

Suggest color palettes and typography.

Create a responsive layout with Grid/Flexbox.

Add smooth scrolling navigation. give prompt and observation and manual code

Code:

Output: <https://vamshikrishna143.lovable.app>

Observation:

AI helped generate a clean and modern portfolio layout with proper use of Flexbox and Grid. It also suggested suitable color palettes and typography, improving the visual design. The use of smooth scrolling and responsiveness enhanced the overall user experience.

TASK-2

Prompt: Online Store Product Page

Design a product display page for an online store.

Requirements:

Display product image, title, price, and "Add to Cart" button.

Use AI to:

Style with BEM methodology.

Make layout responsive.

Add hover effects and "Add to Cart" alert.

Code:

Output: Online Store Product Page

Observation:

Using GitHub Copilot helped quickly generate structured code following BEM methodology, improving readability and maintainability. It also suggested responsive styles and hover effects, making the UI more interactive. Additionally, it assisted in adding the "Add to Cart" alert functionality efficiently.

TASK-3

Prompt: Event Registration Form

Build an event registration form for a conference.

Requirements:

Collect name, email, phone number, and session selection.

Use AI to:

Add form validation with JavaScript.

Make the form accessible with labels and ARIA.

Style with a professional look.

Code:

```
164 <body>
165   <main class="registration" aria-labelledby="formTitle">
166     <form class="registration_form" id="eventform" novalidate aria-describedby="formStatus">
167       <div class="registration_field">
168         <input
169           id="email"
170           name="email"
171           autocomplete="email"
172           required
173           aria-required="true"
174           aria-describedby="emailHint emailError"
175         />
176         <p class="registration_hint" id="emailHint">Use a valid email, for example name@example.com.</p>
177         <p class="registration_error" id="emailError" aria-live="polite"></p>
178       </div>
179       <div class="registration_field">
180         <label class="registration_label" for="phone">Phone Number <span class="registration_required" aria-hidden="">*</span></label>
181         <input
182           class="registration_input"
183           type="tel"
184           id="phone"
185           name="phone"
186           inputmode="tel"
187           autocomplete="tel"
188           required
189           aria-required="true"
190           aria-describedby="phoneHint phoneError"
191         />
192         <p class="registration_hint" id="phoneHint">Enter 10 to 15 digits, optional +, spaces, or dashes.</p>
193         <p class="registration_error" id="phoneError" aria-live="polite"></p>
194       </div>
195       <div class="registration_field">
196         <label class="registration_label" for="session">Session Selection <span class="registration_required" aria-hidden="">*</span></label>
197         <select
198           class="registration_select"
199           id="session"
200           name="session"
201           required
202           aria-required="true"
203           aria-describedby="sessionHint sessionError"
204         >
205           <option value="">Select a session</option>
206           <option value="ai-innovation">AI Innovation in Business</option>
207         </select>
208       </div>
209     </form>
210   </main>
211 </body>
```

Observations:

- Data collection requirement is fully met. The form collects Full Name, Email Address, Phone Number, and Session Selection with clearly separated input controls.
- JavaScript validation is implemented and practical. Validation checks include:
 - Name must be at least 3 characters.
 - Email must match a standard email pattern.
 - Phone allows optional +, spaces, dashes, and enforces 10-15 characters.
 - Session must be selected (not default option).Errors are shown inline near each field, and submission is blocked until valid.
- Accessibility requirement is covered well. Accessibility features include:
 - Proper label-to-input association using for/id.
 - aria-required and aria-invalid states.
 - aria-describedby linking each field to hint + error text.
 - Live regions using aria-live and role-status for status/error announcements.
- Professional styling is achieved. The form uses a clean card-based layout, balanced spacing, clear typography, subtle shadows, focus rings, and a branded action button. It is responsive for smaller screens through media queries, maintaining readability and usability.

Overall quality observation. This is a strong conference registration form suitable for academic/demo submission because it combines usability, accessibility, validation, and polished presentation in one page.

If you want, I can also add a "Reset" button and success modal popup version as an enhanced Task 3 submission.

Output: [Conference Event Registration](#)

Conference Event Registration

Complete your details to reserve your seat for the Annual Tech Leadership Conference.

Full Name *

Enter first and last name.

Email Address *

Use a valid email, for example name@example.com.

Phone Number *

Enter 10 to 15 digits, optional +, spaces, or dashes.

Session Selection *

Select a session

Choose one conference track you want to attend.

Register Now

Observation:

Using GitHub Copilot helped quickly generate form validation logic, ensuring correct input for email and phone fields. It also improved accessibility by suggesting proper labels and ARIA attributes. Additionally, it enhanced the UI with clean, professional styling for a better user experience.

TASK-4

Prompt: Resume Website

Build a one-page online resume.

Requirements:

Sections: Profile Summary, Skills, Education, Experience.

Use AI to:

Propose professional typography styles.

Align sections using CSS Grid.

Add smooth scroll navigation between sections.

Code:

Output: One-Page Resume

Observation:

Using GitHub Copilot helped suggest clean and professional typography, improving readability of the resume. It also assisted in structuring sections using CSS Grid for a well-aligned layout. Additionally, it enabled smooth scroll navigation, making the one-page resume more interactive and user-friendly.

TASK-5

Prompt: Restaurant Menu Page

Design a digital menu page for a restaurant.

Requirements:

Display menu items with name, description, and price.

Use AI to:

Suggest a food-friendly color palette.

Design a responsive card-based layout.

Add hover effects on menu items.

Code:

```
<!-- palette -->
<div class="menu_palette" aria-label="Suggested food-friendly color palette">
  <span class="menu_switch"> Tomato Red #D94F30 </span>
  <span class="menu_switch"> Olive Green #68BE23 </span>
  <span class="menu_switch"> Cream #FFF8E8 </span>
  <span class="menu_switch"> Charcoal #2F2A26 </span>
</div>

<!-- menu items -->
<div class="menu_grid" aria-label="Menu items">
  <article class="menu_card">
    <div class="menu_card_top">
      <h2 class="menu_card_name">Smoky Tomato Basil Soup</h2>
      <p class="menu_card_price">$7.50</p>
    </div>
    <p class="menu_card_desc">Roasted tomatoes, fresh basil, and cream finished with herb oil and toasted sourdough crumbs.</p>
    <span class="menu_card_tag">Starter</span>
  </article>

  <article class="menu_card">
    <div class="menu_card_top">
      <h2 class="menu_card_name">Garden Herb Pasta</h2>
      <p class="menu_card_price">$13.90</p>
    </div>
    <p class="menu_card_desc">Hand-tossed pasta with olive pesto, cherry tomatoes, spinach, and parmesan flakes.</p>
    <span class="menu_card_tag">Vegetarian</span>
  </article>

  <article class="menu_card">
    <div class="menu_card_top">
      <h2 class="menu_card_name">Citrus Grilled Chicken</h2>
      <p class="menu_card_price">$16.40</p>
    </div>
    <p class="menu_card_desc">Marinated chicken breast served with garlic mashed potatoes and sauteed seasonal vegetables.</p>
    <span class="menu_card_tag">Main Course</span>
  </article>

  <article class="menu_card">
    <div class="menu_card_top">
      <h2 class="menu_card_name">Caramel Walnut Cheesecake</h2>
      <p class="menu_card_price">$6.80</p>
    </div>
    <p class="menu_card_desc">Classic cheesecake layered with salted caramel, crushed walnuts, and vanilla cream.</p>
    <span class="menu_card_tag">Dessert</span>
  </article>

  <article class="menu_card">
    <div class="menu_card_top">
      <h2 class="menu_card_name">Sparkling Lime Mint Cooler</h2>
      <p class="menu_card_price">$4.20</p>
    </div>
    <p class="menu_card_desc">Fresh lime, mint leaves, and sparkling water over ice for a crisp, refreshing drink.</p>
    <span class="menu_card_tag">Beverage</span>
  </article>

  <article class="menu_card">
    <div class="menu_card_top">
      <h2 class="menu_card_name">Spiced Paneer Skewers</h2>
      <p class="menu_card_price">$10.90</p>
    </div>
    <p class="menu_card_desc">Char-grilled cottage cheese cubes with peppers, onions, and smoky yogurt dip.</p>
    <span class="menu_card_tag">Chef Special</span>
  </article>
</div>
```

DESIGNING A PRODUCT PAGE FOR ONLINE STORE

Requirements:

- Display menu items with name, description, and price.
- Use AI to:
 - Suggest a food-friendly color palette.
 - Design a responsive card-based layout.
 - Add hover effects on menu items.

give normal observation

I will create a new restaurant menu page with a warm, food-friendly palette, responsive menu cards, and hover interactions, then share simple observations in normal wording.

Created in - restaurant-menu-page.html

Created the page in - restaurant-menu-page.html

Normal observations:

1. Menu content requirement is completed. Each card clearly shows item name, short description, and price.
2. Food friendly palette is well chosen. The design uses warm tomato red, fresh olive green, soft cream, and charcoal text, which feels appetizing and readable.
3. Responsive card layout works properly. The page uses a flexible grid with auto-fit cards, so it adjusts smoothly from desktop to mobile.
4. Hover effects are present and clean. On hover, cards lift slightly, shadow increases, and border tone changes, which improves visual feedback without being too flashy.
5. Overall look is professional and user-friendly. Typography, spacing, and contrast are balanced, making the digital menu easy to scan and visually appealing.

If you want, I can make a second variant with category filters like Starters, Main Course, Desserts, and Beverages.

Output: [Restaurant Digital Menu](#)

Observation:

AI helped suggest an attractive and food-friendly color palette, making the menu visually appealing. It also generated a responsive card-based layout for better organization of items. Additionally, hover effects improved user interaction and overall user experience.
